6 years 6 months

Director, Product Management

October 2023 - Present (3 years)

Cambridge, England, United Kingdom

Senior Solution Architect - Patient Data

April 2020 - October 2023 (3 years 7 months)

Melbourn, England, United Kingdom

WIBBLE LTD

Business Owner

September 2019 - May 2025 (5 years 9 months)

Hertfordshire

Cloud services and software solution consultancy

Fortrus Ltd

8 years 3 months

Chief Technical Architect

July 2017 - August 2019 (2 years 2 months)

Stevenage, United Kingdom

As Chief Technical Architect at Fortrus, I initiated the cloud first engagements with possible partner companies (AWS, Azure, GCP), by reviewing the available possible partners inline with the NHS Digital guidelines and NCSC recommendations, and defined, designed and have since been involved in the build of the Fortrus Health Cloud as the Cloud First Initiative for Fortrus health care customers. This was designed as a new go to market strategy for

Fortrus to enable faster rollouts with reduced resource overheads, taking a 3 to 6 month implementation to a scripted 4 hour setup and canned data load processes all documented and repeatable, shaving weeks down to days.

Chief Technical Officer

June 2011 - June 2017 (6 years 1 month)

As Chief Technical Officer at Fortrus, I was involved in many activities as outlined below.

Assisting in developing support, development and sales teams by supporting them as they grew with adapting needs inline with customer feedback and requirements.

Continuously reviewed the partners, processes and tools used; to ensure improvements were introduced as and where appropriate with minimal disruption to deliveries.

Identified and defined opportunities for new applications, and new features in existing applications to increase customer value.

Supported the sales team through direct customer engagements as well as the tender process.

Oversaw the technical strategies, software development, support, and technical implementation of the entire suite of Fortrus products and solutions. Implemented an aggressive feature release roadmap and delivery schedule for one of Fortrus main enterprise applications, used by 000's of clinical users across multiple organisations.

Recruited, built and managed an in-house development team from 0 to 13 strong.

Creation of technical related documents for board level presentations, both internally and for customers.

Implemented an internal communications platform within Fortrus, to educate everyone on what the latest status of all projects were, how new release features worked and what new features were coming through the roadmap.

Initiated and implemented a strategy of Company Partnerships to increase sales opportunities, initially starting with global companies such as EMC, Adobe and Ephesoft, followed more recently by MongoDB, Forcare (Philips) and Amazon Web Services (AWS).

Initiated and Implemented the Team Training Program using a variety of online and face to face based training methods.

Product Manager/Owner Responsibility for one of the Fortrus enterprise applications.

Hands on development for proof of concept work, before passing across to the development team to implement within the Fortrus products.

PNMsoft

BPM Consultant

February 2010 - June 2011 (1 year 5 months)

Business Process Management software consultant and technical lead.

Provided technical Pre-Sales support, to assist the sales team in demonstrating the relevant features and how the PNMSoft products can be used as a low code solution for common business scenarios.

Working with customers, to define problems and requirements, then generate initial process designs, technical designs and convert these to proof-of-concept deliverables.

Provided technical training for customers and the internal consultancy team, on PNMSoft products.

Astea International

Technical Consultant / Business Consultant / Pre Sales

August 2004 - February 2010 (5 years 7 months)

Customer Support for software issues, from diagnosis through to resolution.

Product and solution technical training for customers and internal teams.

Technical delivery of software from specification of requirements, to development, installation and configuration.

Designed / architected and implemented an event broker for an event driven integration interface, allowing for real-time messaging from the Astea solutions to multiple subscribers, this enabled EDS-GFS to provide full integration with several helpdesk and warehouse management solutions.

Interdirect Limited

Senior Software Developer

2002 - August 2004 (2 years)

Designed and developed a Rent Review application for LendLease Bovis, to support their Shopping Centre management teams in identifying stores and retail trends which would impact revenue, allowing for operational alterations.

This involved data collection, data warehousing and reporting / forecasting.

This allowed LendLease to identify where the stores were falling out of fashion and so enable them to "push" them out, replacing them with perceived higher value retailers.

Designed, developed, and consulted on websites, intranets, and web based applications, using Microsoft technologies.

Managed and Maintained the infrastructure for hosting of websites (Apache, MS IIS), databases (MySQL, MS SQL), Email (sendmail) and DNS (bind) services.

Citrusmedia.net
Director / Developer
2001 - 2002 (1 year)

Development of online content management solutions, for a range of customers to enable them to self manage the content and websites. These were built in .net or php with MS SQL databases and javascript, before the modern frameworks.

Education

De Montfort University
BSc (Hons), Multimedia Computing · (1997 - 2001)

Leeds College Of Technology
BTEC, Media Technology · (1995 - 1997)
